

## Office Anywhere:

## Does Business Faster – From Anywhere

The following are examples of how a variety of businesses can benefit:

- **CPAs** — Pass financial files securely and quickly without getting lost in email spam filters
- **Construction** — Push through change orders and avoid costly delays waiting for documented instructions.
- **Real Estate Agents** — Connect with clients via immediate Smartphone uploads of photos and videos and then text to arrange a walk through
- **Attorneys** — Instantly fulfill court house requests for printing, faxing or emailing pertinent case files—from anywhere
- **Doctors** — View patients' health records and securely document comments paperlessly while remaining HIPPA compliant
- And many more professions

### Technical & Security Information

- Supports both Windows and Macs
- Supports iPhone, Android and Blackberry plus 800+ other mobile devices
- Data transferred or at rest with 256-bit SSL encryption
- Data is mirrored and backed up regularly in two independent data centers that are physically monitored 24/7

### A Better Way to Get More Done

The ability to do more with your files allows you to do more business and provide better client service — wherever business takes you.

- **Folder Sync** – All files in the sync folder sync in real time on all computers. You can even work offline and changes to files will be updated across all connected computers when a connection is available.
- **Remote Computer Access** - Access any file on any computer that has Office Anywhere on it
- From ANYWHERE!
- **Access** - Whether on the go or working with others, get unlimited and secure access to your backed up files to keep business moving forward.
- **Backup** - Automatically back up your files the instant you or your colleagues make changes for worry-free productivity.
- **Control** - Work more securely with virtual teams with complete access control every step of the way.

### How it Works

Secured file flexibility and collaborative sharing is possible because the Desktop Agent copies your files to a single, secured designated location in the cloud. This enables files to be:

- Immediately available for sharing, editing, printing, faxing or restoring—anywhere there's an Internet connection
- Viewed or shared from any mobile device — even large files, such as videos and pictures
- Organize into projects for private viewing by assigned team members for greater productivity
